

Installation Manual

Compatibility

Compatibility is easy. You will need a boat with a working battery. Once installed on your boat, you can monitor and control your boat from anywhere you have internet access. That's it.

Yes, that's really it!

Boat Command is available as a free app for your iPhone, Android phone, and your Android or iOS tablet. You can also connect with your boat from your web browser on your computer.

For more details and updates go to our website, boatcommand.com.

Get additional information for installing our device on your boat at boatcommand.com/support. You'll find help for adding a shore power sensor, controlling your boat's lights, heater/AC, or refrigerator, setting up door or motion sensors, and more!

Contents

This installation manual is designed to help you with the two fundamental steps of installation

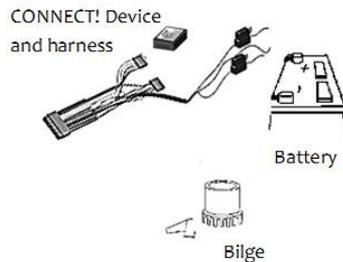

Install on your phone/computer:

- Install app
- Subscribe

Install the hardware device on your boat:

- Basic installation
- Add bilge monitoring

Step 1

Install Boat Command Free App

The Boat Command app is free. This makes it easy for you, your family, and your friends to all connect to the boat and with each other.

Go to boatcommand.com/android for the Android app.

or

Go to boatcommand.com/apple for the iPhone or iPad app.

or

Go to connect.boatcommand.com on your web browser.

Step 2

Get Free Boat Command Account

Now that you have the app installed, you need to set up an account for yourself. It's as easy as 1-2-3.

1. Go to connect.boatcommand.com on your web browser.
2. Click on [sign up](#).
3. Enter your email address and choose a password.

You will now receive an email to confirm that you have signed up. Follow the directions from our email.

You can also use your Android app to sign up and subscribe.

TIP!

You can use Safari on your iPhone or iPad to sign up and subscribe. When you go to connect.boatcommand.com it will prompt you to Download App. Click on "Continue to website anyway" and proceed from there.

Step 3

Add Your Boat

Next, add your boat. This ties your boat to your account.

You may have already subscribed. If so, you will simply add your boat name and the device code at this time. If you have not already subscribed, Boat Command will prompt you for a payment method.

Once you've added your boat and your subscription to Boat Command is complete you are ready to install the device on your boat.

TIP!

After adding your boat and subscribing, you can begin adding unlimited shared users. Invite friends and family to share your boat connection. They can use our free app and share your boat connection at no cost whatsoever.

Step 4

Basic Installation

Connect the harness to your battery.

Connect the long red and black leads to the main battery.

Many boats will have optional places to access 12 volts or 24 volts from a battery or a set of house batteries. Your battery switch is often a convenient spot for this.

TIP!

You can connect your Boat Command device to any battery or battery bank that you choose. Whichever you connect your main red and black leads to will become the source of voltage that you will monitor as battery #1.

Step 4 (continued)

Basic Installation

Fit the harness into the Boat Command device. Then mount the device in a dry area on the boat. You can use zip ties or electrical tape to keep the unit secure.

That's it, you are finished. Now fire up your app and check on your boat! You should be able to see battery voltage, GPS location, weather, and alert status.

TIP!

When first connecting the harness to the device you should observe small lights on the device. If these lights are not on or blinking, you may need to check your connections to your battery.

TIP!

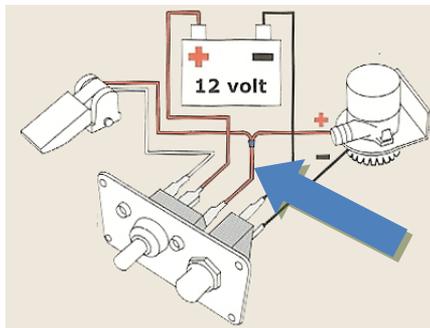

Remember the four-digit device key code (i.e. A-127) on the label.

Monitor Bilge Activity (option)

Many boat owners will want to keep track of bilge activity. Boat Command will keep track of the frequency and duration of bilge activity on your boat.

To hook up your device to your bilge, connect the blue wire from your harness to the positive side of your bilge pump. You can test this by turning on your bilge and then checking your app or website. There will normally be about a 30 second delay.

A typical bilge system. Connect the blue wire to the positive side of the bilge pump.

Set Up Alerts

Have Boat Command alert you of situations before they become dire.

Boat Command can alert you via email or text message.

Boat Command alerts are very flexible. Set up your alerts in Account Settings. There you can choose an email address or phone number, or both, to receive the alerts. Any shared user may choose to receive, or not to receive, alerts for your boat.

Individual alert settings may be found in the detail pages. For instance, to change your bilge activity alert options, touch or click "bilge pump." This will take you to bilge pump details. From there you can personalize (or would it be vesselize?) your settings.

Color Code Quick Reference

Purpose	Description	PIN	Color	
Battery #2	To battery #2 (positive)	5	Pink	
Bilge counter	To positive side of bilge pump	3	Blue	
Bilge counter #2	To positive side bilge pump #2	7	Gray
